

Month 3 Results — May 2026

Practice: Dr. Imran Qureshi, D.O. Period: May 1–18, 2026 Prepared by: Leadmill

The headline

Month 3 is a clear win. Every metric that measures actual patient activity is materially up versus April:

METRIC	APRIL	MAY PROJECTED	VS APRIL
Phone calls from GBP	50	~76	+52%
Website clicks from GBP	39	~66	+69%
Direction requests from GBP	51	~58	+14%
Total profile interactions	140	~200	+43%
Organic search clicks	18	~100	+455%
Organic impressions	729	2,340 (28-day)	+221%
Total website sessions	131	167 (28-day)	+27%

The April work — the GBP URL switch from cls.health to drimranqureshi.com, plus the site-wide content overhaul — is now showing up as real patient activity, not just search-engine metrics.

What this means

At April's pace, you were averaging 1.7 phone calls a day from your Google Business Profile. In May (through the 15th), you're averaging 2.5 calls a day. That projects to roughly **26 additional new-patient phone calls** this month compared to April — just from the changes Google sees in your profile and site.

The bigger story is on search. Google indexed your site for new conditions, treatments, and city-specific queries that weren't there last month. Patients are now finding the practice when they search for things like:

- *peripheral neuropathy treatment in katy*
- *shoulder pain treatment in katy*
- *radiofrequency and ultrasound treatments katy, tx area*

- *regenerative therapy katy tx*
- *knee pain relief in katy*
- *pain management doctors sugar land*
- *back pain fulshear*
- *prp treatment fulshear*

These are exactly the kinds of buyer-intent queries that drive new-patient bookings — patients who already know what they need, looking for someone nearby who provides it.

What we delivered in May

May 1 — New treatment pages + blog content

- New treatment page: GLP-1 Medical Weight Loss
- Rewrote the PRP Therapy page with practice-specific pricing, protocol, and exclusion criteria
- Two new patient-education blog posts: *GLP-1 Medications for Weight Loss*, *PRP vs Cortisone Injections*
- Built dedicated anatomy-specific procedure pages for Lumbar ESI, Cervical ESI, and Shoulder Injection

May 2–6 — Local SEO foundation work

- Built a custom Maps rank tracker (replaces the previous \$297/month subscription with an in-house tool at no ongoing cost)
- Verified and expanded the directory profile schema across all pages — now linking to 10 verified third-party profiles (Healthgrades, Doximity, WebMD, Healthline FindCare, Medical News Today, LinkedIn, Zocdoc, Memorial Hermann, CLS Health, and Vitals)
- Differentiated all 5 city-specific landing pages (Cinco Ranch, Cypress, Fulshear, Richmond, Sugar Land) with unique local content covering geography, demographics, and condition patterns specific to each area

May 6–7 — Conversion measurement + entity language

- Set up Google Analytics 4 conversion tracking site-wide — phone clicks, online-booking clicks, directions clicks, and form submissions are now all measurable
- Added "knee doctor" and "sports injury doctor" language to the homepage, About page, and relevant condition pages — targeting two keywords where the practice had no prior visibility

Local map rankings: a note on volatility

The local map rankings (the "3-pack" you see at the top of Google Maps search results) have been volatile in May. This is normal — whenever a practice ships major changes to their site or Google profile, Google's algorithm takes 4–8 weeks to re-evaluate and settle. We're in the middle of that window.

Two map keywords showed sustained improvement across the full month:

- **"Pain management doctor near me"** — average rank improved from 8.4 to 7.6, and the practice appeared in the local 3-pack on 2 different grid points across Katy for the first time
- **"Pain specialist near me"** — average rank improved 2.5 positions (12.6 to 10.1), with top-10 coverage nearly doubling (8 grid points to 15)

One keyword — "epidural steroid injection katy" — briefly hit the local 3-pack on 5 grid points in early May before correcting back to its baseline. This kind of week-to-week swing during the recovery window is expected and not a concern. The conversion-tier metrics (calls, clicks, website traffic) are the durable signal that the work is delivering.

What's still pending

- **Memorial Hermann directory listing:** Their record lists you at an old Webster, TX address. Worth a quick correction request through MHMD so the profile reflects your current Cinco Ranch location.
- **GBP photos:** A few photos requested in late April are still pending. Better photos drive higher conversion on the GBP profile.
- **2 directory listings:** Yellow Pages (retry) and Angi. These will be claimed within the next week.

Month 4 — three directions to consider

The strong Month 3 numbers give us flexibility for Month 4. Three directions, in priority order:

Option A — Push deeper on local SEO (recommended)

Build on the momentum: focus on review volume, GBP post cadence, and 2–3 new procedure pages. Best case: first 3-pack appearances on the primary "pain management katy" keyword family by end of June.

Option B — Expand content + topical authority

Lean into the organic search momentum (clicks up 233%): 4 new blog posts on procedure-specific patient questions, 2 new condition deep-dives (Sciatica, Cervical Stenosis), expand AI Overview citation coverage. Best case: first AI Overview citations + 50%+ organic click growth in June.

Option C — Conversion-focused work

Now that GA4 conversion tracking is live, analyze where website visitors drop off, A/B test homepage CTAs and "Book Online" placement, add testimonials to top treatment pages. Best case: higher conversion rate even with similar traffic levels.

My recommendation is **A or a hybrid of A and C**. We can discuss in the call.

Headline metric to watch in June

Phone calls from GBP — June vs May

If May ends at the projected 76 calls, that's a meaningful new baseline. June's target is 85+ calls (a further 10–15% improvement) as the algorithm finishes its re-evaluation and the durable Maps wins (pain management doctor near me; pain specialist near me) continue to mature.
